# Dan Baker

Senior Software Developer & AI Engineer

Eagle Mountain, UT • bakerz2009@gmail.com • linkedin.com/in/daniel-baker • github.com/Retcor • bakerrang.com

## SUMMARY

Full stack software developer with 14 years of experience shipping production software across fintech, legal tech, and health tech. Comfortable across the whole stack, from React and TypeScript on the front end to Kotlin, Java, and Node on the back end, running on Google Cloud. Currently on a dedicated AI team building RAG features and internal AI tooling. Happy digging into unfamiliar systems and getting things across the finish line without a lot of hand holding.

## SKILLS

**Languages:** JavaScript, TypeScript, Kotlin, Java, Python, SQL, HTML, CSS
**Frontend:** React, Redux, Next.js, Tailwind CSS, Vite
**Backend:** Node.js, Express, Spring / Spring Boot, Ktor, Django, REST APIs
**Cloud & DevOps:** Google Cloud Platform, Docker, Kubernetes, CI/CD, Git
**Databases:** PostgreSQL, Firestore, vector search
**AI:** Anthropic Claude, OpenAI, RAG pipelines, embeddings

## EXPERIENCE

**Senior Software Developer / AI Engineer**, Equivant — Dec 2023 - Present

- Returned to build integration software, shipping dozens of interfaces that connect customer systems into Equivant's CMS products, including the customer facing coordination and testing that went with them.
- Helped lead a company wide AI initiative and wrote the initial validation and proof of concept docs that laid out both the benefits and the risks of adopting it.
- Joined a newly formed AI team working on greenfield projects, shared AI tooling, and in app RAG features.
- Built an internal library for document upload and download used across products, and added eFiling and eCitation support to multiple CMS products.
- Redesigned several integration apps to feel more modern, which made customers noticeably more willing to use them.

**Senior Software Developer**, tZERO — Dec 2021 - Dec 2023

- Hired as a senior front end developer but spent most of the time on the back end, where the team needed the most help.
- Maintained microservices across a mixed stack of React/Redux, Kotlin/Spring, Kotlin/Ktor, Node, and Next.js.
- Migrated customer data off legacy services, retiring ten year old functionality and letting the team delete several microservices that were no longer needed.
- Consolidated KYC identity verification from several vendors down to one, which cut cost and made the whole flow easier for customers.
- Integrated Plaid end to end in about a week to hit a tight deadline, and worked with DevOps to tighten up the CI/CD pipelines.

**Senior Software Developer / Team Lead**, Equivant — Jul 2015 - Dec 2021

- Led a team of four developers from late 2019 on, spending roughly 40 percent of my time on code reviews, architecture discussions, and general management.
- Shipped hundreds of full stack features on deadline, from small UI additions to a multi file uploader that handled an unlimited number of documents and files of 2 GB or more.
- Built a configurable CMS that let legal users customize their case screens around the data most relevant to them, from dockets and charges to associated documents.
- Helped grow the platform and bring on its first customers, and wrote the coding standards and ran the trainings that kept the teams aligned.

**Software Developer**, Software Technology Group — Jan 2015 - Jul 2015

- Consulted for Equivant, building out their new JWorks 2 product on both the front and back end.
- Implemented a court CMS used across the United States and Australia.
- Cut client load times by shrinking downloaded assets and adding caching and server side paging across the app, which led to a full time offer from Equivant.

**Junior Software Developer**, USANA Health Sciences — Nov 2012 - Jan 2015

- Started out writing tests for backend Java services and handling manual database reporting, then automated those manual processes with a JavaScript project, which turned into a full time offer.
- Maintained and improved an in house payments system that processed credit card payments through a third party vendor.
- Became a go to person across teams within six months by being willing to dig into any system that needed it.

## SIDE & CONTRACT WORK

**Software Developer**, Cratermus.com — Jul 2026 - Present

- Designed and built a marketing site for a local music producer, with ongoing feature work to support their marketing. Built with Next.js, React, and TypeScript.

**Software Developer**, Keyhole / 1898 and Co — Nov 2023 - Feb 2024

- Nightly contract improving and extending existing APIs, and a good chance to get hands on with Python and Django.

**Junior Developer**, Ilio — May 2013 - Feb 2014

- Early career night job building features for a music software vendor portfolio platform, using Java and Spring.

## EDUCATION & CERTIFICATIONS

Completed college coursework in computer science before starting my career in software.

**Certifications:** CompTIA A+ • HackerRank React (Basic)
